Felt Conditioning Chemicals are specialty chemical formulations engineered to modify the surface energy, hydrophilicity, and tactile properties of felt and industrial nonwoven substrates. In 2025, global felt conditioning and performance chemicals production reached approximately 2,393K ton, with an average global market price of around USD 2,850 per ton. A factory gross profit of USD 798 per ton with 28% gross margin. A single line full machine capacity production is around 10K ton per line per year. The upstream is dependent on petrochemical feedstocks. The downstream demand is concentrated in pulp processing, printing and containerboard. A tissue producer implemented enzymatic felt cleaners to reduce pitch accumulation while minimizing harsh alkaline cleaning to lower felt wear rate and reduce chemical oxygen demand discharge. Vietnam and India leads due to supply chain shift from China.
