Abstracts

The global Fenchyl Acetate market size is predicted to grow from US$ 275 million in 2025 to US$ 405 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2024, global Fenchyl acetate production reached approximately 2,950 tons, with an average global market price of around US$ 89,000 per ton. Fenchyl acetate is a naturally occurring ester formed from fenchol and acetic acid, commonly found in essential oils such as those of fennel, lavender, and pine. It is a colorless to pale yellow liquid with a fresh, camphoraceous, and slightly fruity odor, making it valuable in the fragrance and flavor industries. In perfumery, fenchyl acetate is used as a middle note to impart freshness, herbaceous tones, and woody undertones, while in flavors it contributes to the taste of herbal, citrus, and spice-like profiles. Its versatility and pleasant aroma ensure its wide application in perfumes, cosmetics, and flavor formulations.

The key market drivers for fenchyl acetate stem from its widespread use in the fragrance, flavor, and cosmetics industries, where demand continues to grow for natural, plant-derived ingredients. Rising consumer preference for clean-label and eco-friendly products is boosting interest in essential oil derivatives like fenchyl acetate, particularly in premium perfumes, personal care items, and aromatherapy formulations. In addition, the expanding food and beverage industry uses it to enhance herbal, citrus, and spice-like flavor profiles, aligning with the trend toward natural flavoring agents. Growing applications in household products such as air fresheners and cleaning solutions also contribute to market expansion, while increasing awareness of sustainable sourcing and regulatory support for natural additives further supports global demand.
