FEP Monofilament is a monofilament made from fluorinated ethylene propylene copolymer (FEP). FEP is a melt-processable modified polytetrafluoroethylene (PTFE) material produced through the copolymerization of tetrafluoroethylene and hexafluoropropylene. FEP monofilament inherits the excellent properties of PTFE, such as excellent chemical resistance, high temperature resistance and electrical insulation, while also overcoming the shortcomings of PTFE's high melt viscosity and difficulty in spinning. FEP monofilament has a low friction coefficient and good lubricity, with a smooth surface and a translucent appearance. In addition, it has good temperature resistance and can maintain stable performance in high temperature environments. These characteristics make FEP monofilament have wide application value in many fields.

The global FEP Monofilament market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
