Fermentation is a biological process that converts sugar to acids, gases, and alcohol. Grains and fruits are fermented to produce alcohol products such as beer and wine.

The healthiest products of fermentation ingredients include lactic acid and ethanol. Lactic acid is regarded as pre-stage material for polylactic acid (PLA). Polylactic acid is proposed an efficient polymer to substitute petroleum-based plastic products. Polymer (polysaccharides) is used widely in food thickening and oil drilling applications. Different enzymes are widely used in bio-refineries. Ascorbic acid and Riboflavin are the most important vitamins derived from fermentation process.
