The global Ferrite Core Inductor market size is predicted to grow from US\$ 887 million in 2025 to US\$ 1281 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

It is the fixed value inductors which have a ferrite core placed inside the coil are known as a ferrite core inductor. The air core inductors and iron core inductors have a low inductance value, limited frequency operation and more losses. By using ferrite core instead of iron core these problem can be overcome.

Mixing Iron oxide (Fe_2O_3) in combination with other metal oxides like (Mn), zinc(Zn) or magnesium(Mg) at a temperature of 1000°C - 1300°C will result in a material with very interesting magnetic properties called ferrite.

Ferrite core inductors have high permeability, high electrical resistivity and low eddy current losses these characteristics make them suitable for many high-frequency applications.

For the major players of ferrite core inductor, the Murata maintained its first place in the ranking in 2019, followed by TDK, Taiyo Yuden. The Top 3 players accounted for about 40% market share of the ferrite core inductor.
