The global Ferrite Soft Magnetic Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Soft ferrite magnets are those that have a low coercivity. Coercivity is a measurement of a magnetic material's ability to withstand external magnetic forces without becoming demagnetized. Some magnetic materials are more susceptible to demagnetization when exposed to an external magnetic force than others. Soft magnets have a low coercivity, meaning they offer a low level of protection against demagnetization. Because of their low coercivity, soft ferrite magnets are commonly used in electrical applications.
