Ferritin calibration solutions are standardized reference solutions used for calibration and verification of ferritin testing in clinical laboratory testing. By providing traceable concentration values, they ensure the accuracy, consistency, and comparability of results across different testing systems. These products are widely used in anemia diagnosis, iron metabolism assessment, and chronic disease monitoring, and are an important component of laboratory quality control and regulatory compliance. The ferritin calibration solution industry chain includes upstream high-purity ferritin protein, buffer systems, stabilizers, and packaging materials. The midstream encompasses preparation, value setting, validation, dispensing, and quality control processes. Downstream applications include hospital laboratories, third-party diagnostic centers, reference laboratories, and research institutions. Supporting services across the industry chain include technical documentation support, calibration traceability support, methodology validation, and after-sales quality assurance to ensure reliable and accurate test results. In 2025, the global production volume of ferritin calibration solutions was approximately 690,000 units, with a global average market price of approximately US\$260 per unit. The gross profit margin of major companies in the industry is between 60% and 80%. In 2025, the global production capacity of ferritin calibration solutions was approximately 920,000 units.
