Ferrous disulfide is an inorganic compound with a chemical formula of FeS2 and a molecular weight of 119.975. There are mainly two minerals in nature: pyrite and marcasite. Marcasite belongs to the orthorhombic crystal system, and its forbidden band width is narrow, which is not suitable for the efficient photoelectric conversion process; pyrite is the most common one, which is a yellow cubic crystal, odorless, and one of the sulfide minerals of the equiaxed crystal system. . There are three crystal forms of natural ferrous disulfide, namely cube, octahedron, pentagonal dodecahedron and its polymorph.
