The global Ferrous Succinate Tablets market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The main active ingredient of ferrous succinate tablets is ferrous succinate. It is a film-coated tablet, which is dark yellow after removing the film coating. Function and indications are the prevention and treatment of iron deficiency anemia.

Iron is one of the important elements in the human body, involved in the synthesis of hemoglobin, and plays an important role in transmitting oxygen and participating in metabolic activities in the human body. Iron is the main component of hemoglobin and myoglobin. Hemoglobin is the main carrier of oxygen in red blood cells. Myoglobin is the part of muscle cells that stores oxygen and provides oxygen for muscle movement. Most enzymes and factors related to the tricarboxylic acid cycle contain iron or only function in the presence of iron. Therefore, after actively supplementing iron supplements for patients with iron deficiency, in addition to accelerated hemoglobin synthesis, symptoms related to tissue iron deficiency and decreased iron enzyme activity, such as growth retardation, behavioral abnormalities, physical deficiency, mucosal tissue changes, and skin and nail lesions, can also be gradually corrected.
