The global Ferrous Sulfate for Lithium Batteries market size is predicted to grow from US\$ 31.07 million in 2025 to US\$ 87.84 million in 2032; it is expected to grow at a CAGR of 16.3% from 2026 to 2032.

Ferrous sulfate for lithium batteries is a specific grade of ferrous sulfate refined for the manufacture of lithium-ion batteries, particularly in producing cathodes such as lithium iron phosphate (LiFePO₄). This type of ferrous sulfate is characterized by its high purity, as impurities can affect the performance of the battery.

Growth of the Electric Vehicle Market:

The increasing adoption of electric vehicles is driving demand for lithium-ion batteries, and, consequently, for high-purity ferrous sulfate used in the production of lithium iron phosphate (LiFePO₄) cathodes.

Renewable Energy Storage:

As the need for renewable energy storage grows, so does the demand for high-quality ferrous sulfate, which is used in stationary battery storage systems.

Rising Adoption of LiFePO₄ Technology:

LiFePO₄ is seen as a more sustainable and safer alternative to other lithium-based cathodes, making it an attractive option for both electric vehicles and energy storage systems.

Expansion of Battery Manufacturing Facilities:

As the global demand for EVs and renewable energy storage solutions rises, there is a significant opportunity for growth in the ferrous sulfate market as manufacturers build new production facilities for lithium iron phosphate batteries.

Quality Control Requirements:

The stringent purity requirements for ferrous sulfate used in lithium-ion batteries mean that manufacturers must maintain high standards and may face challenges related to quality control during production.
