Ferrules for Modular Components are precision ceramic parts used to mechanically retain, position and optically align fibers inside optical transceivers, optoelectronic devices and photonic packaging assemblies. They are generally manufactured from yttria-stabilized zirconia powder through feedstock preparation, injection or extrusion molding, debinding, sintering, precision inner- and outer-diameter grinding, end-face preparation and dimensional inspection. Common outside diameters include the 2.5 mm and 1.25 mm classes, together with customized sub-miniature dimensions for compact photonic packages. Critical specifications include bore diameter, outside diameter, concentricity, eccentricity, cylindricity, straightness, surface roughness, end-face geometry and thermal-mechanical stability. Major product forms include bare cylindrical ferrules, zirconia capillaries, fiber stub ferrules, zirconia capillaries press-fitted into stainless-steel or Kovar flanges, ferrule-based pigtail subassemblies and ceramic multifiber ferrules designed for high-temperature assembly processes. These products provide a stable optical axis between fibers and lasers, photodetectors, waveguides or mating connectors and are used in TOSA, ROSA and BOSA receptacles, coaxial and butterfly optical packages, coherent communication devices, pluggable optical transceivers, industrial and medical photonic modules, and next-generation co-
