The report requires updating with new data and is sent in 48 hours after order is placed.

According to our LPI (LP Information) latest study, the global Fertility Services market size was valued at US$ 11160 million in 2023. With growing demand in downstream market, the Fertility Services is forecast to a readjusted size of US$ 18350 million by 2030 with a CAGR of 7.4% during review period.

The research report highlights the growth potential of the global Fertility Services market. Fertility Services are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Fertility Services. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Fertility Services market.

Fertility is the natural capability to produce offspring. As a measure, fertility rate is the number of offspring born per mating pair, individual or population. Fertility differs from fecundity, which is defined as the potential for reproduction (influenced by gamete production, fertilization and carrying a pregnancy to term). A lack of fertility is infertility while a lack of fecundity would be called sterility.

The underlying causes covered in the fertility services market report include male and female infertility. Among the two, female infertility is likely to be the dominant segment over the forecast period. Factors credited to the success of the segment include the prevalence of obesity, elapsed age of motherhood, endometrial tuberculosis, and other medical conditions.
