Abstracts

The global Ferulic Acid Esterase market size is predicted to grow from US$ 40.8 million in 2025 to US$ 50.82 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

In 2024, global ferulic acid esterase production reached 940.6 tons, with an average selling price of $43/kg.

Ferulic acid esterase is a key member of the carbohydrate esterase family and belongs to the hydrolase class. Its core function is to specifically catalyze the hydrolysis of the ester bond between ferulic acid and plant cell wall polysaccharides, releasing free ferulic acid and deferulinated polysaccharide fragments, thereby disrupting the integrity of the cell wall structure and promoting the efficient degradation of lignocellulose.

The upstream of ferulic acid esterase is microbial strains and fermentation raw materials, and representative companies include manufacturers such as Guangdong Mingtong Biotechnology; the midstream is the fermentation purification and compounding process of ferulic acid esterase preparations (liquid/solid fermentation, enzyme activity stabilization technology); the downstream is used in food antioxidant extraction, pharmaceutical intermediate synthesis, feed additives and bio-based material degradation.
