## Abstracts

The global FET Drivers market size is predicted to grow from US$ 94.29 million in 2025 to US$ 132 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2024, global FET driver production will reach 8.5936 million units, with an average selling price of $10.27 per unit.

A FET driver is an integrated circuit or discrete circuit module specifically designed to control the switching behavior of field-effect transistors (such as MOSFETs, JFETs, or IGBTs). Its core function is to efficiently switch the device between the on and off states by precisely regulating the gate-source (G-S) or gate-drain (G-D) voltage/current. Such drivers must meet requirements for fast switching response, low switching losses, and high reliability. They typically integrate protection mechanisms such as undervoltage lockout (UVLO), overcurrent protection (OCP), thermal shutdown (TSD), and dead-time control to prevent device failure due to voltage/current stress, thermal runaway, or signal delays. They also optimize electromagnetic compatibility (EMC) and support high-frequency switching applications (such as PWM modulation). In power electronics systems, FET drivers serve as the interface between the power stage and control logic. They are widely used in switch-mode power supplies (SMPS), motor drives, inverters, LED dimming, and digital signal processing (DSP) peripheral circuits. Their performance directly impacts system efficiency, thermal design, and dynamic response characteristics.

The upstream of FET drivers is semiconductor materials and wafer manufacturing (silicon-based/compound semiconductors, wide bandgap materials), represented by TSMC, SMIC, SUMCO, Shin-Etsu Chemical, Wolfspeed (Cree), Rohm Semiconductor, etc.; the midstream is chip design, wafer manufacturing, packaging and testing (Infineon, Texas Instruments, ON Semiconductor, STMicroelectronics, Renesas

Electronics, Silan Microelectronics, Hua Hong Semiconductor, etc.); the downstream is new energy vehicle electric drive systems, industrial inverters, consumer electronics power supplies, 5G base stations and data centers.
