Few-Walled Carbon Nanotube Suspension refers to a suspension or slurry containing Few-Wall Nanotubes (FWNTs). Few-Wall Nanotubes are a variant of Carbon Nanotubes, which have a relatively small amount of wall structure, usually consisting of only a few layers of carbon atoms. Oligotubes slurries can be used in the preparation, coating and molding of carbon nanotubes to obtain the desired properties and applications. Such slurries typically consist of oligotubes and a solvent or other dispersant for achieving uniform dispersion and processing of the oligotubes. With high specific surface area, high electrical conductivity, good dispersion and thermal stability,

the wall less tube slurry is suitable for electronic devices, conductive coatings, sensors, catalysts and composites.
