The global Fiber Bragg Grating Temperature Sensor market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Fiber Bragg grating temperature sensor is a sensor that uses the characteristics of fiber Bragg grating to measure temperature. Fiber grating is a structure with periodic refractive index changes formed in an optical fiber. It can selectively reflect or transmit incident light to form a narrow-band filter. When a fiber grating is affected by temperature changes, its reflection or transmission wavelength will also change accordingly. This wavelength change can be used to represent temperature changes. By measuring the wavelength change of the fiber grating, the temperature information can be obtained.
