The global Fiber Glass Mesh market size is predicted to grow from US\$ 411 million in 2025 to US\$ 513 million in 2031; it is expected to grow at a CAGR of 3.8% from 2025 to 2031.

Fiberglass mesh is a crisscross pattern of carefully woven fiberglass threads used to make new products such as tapes and filters. When it is used as a filter, manufacturers usually spray PVC coating to make it stronger and more durable. It is widely used in construction and industrial fields, with excellent corrosion resistance, alkali resistance, heat resistance and high strength.

Fiberglass mesh is a mesh made of glass fiber filaments twisted and woven. It is often coated with ethylene polymer to become a fiberglass mesh with better corrosion resistance. It is characterized by weathering resistance, corrosion resistance and low price. It is often used as a screen window. When constructing a wall composite insulation system, a fiberglass mesh with a larger mesh is often used to resist cracking. Fiberglass mesh cloth is based on glass fiber woven fabric and is soaked in a polymer anti-emulsion coating. It has good alkali resistance, flexibility and high tensile strength in warp and weft directions. It can be widely used in building interior and exterior wall insulation, waterproofing, fire prevention, crack resistance, etc. The main global fiberglass mesh manufacturers include Jiangsu Zhengwei New Materials, Masterplast and Adfors (Saint-Gobain), etc. The top three global manufacturers account for about 30% of the market share.

The global fiberglass mesh market is experiencing significant growth, thanks to the growing demand in key industries such as construction, automotive, aerospace and infrastructure development. Fiberglass mesh is particularly popular for its strength,

durability, and resistance to environmental factors, making it an essential material in applications such as exterior wall insulation, roofing, and waterproofing.

Fiberglass mesh is widely used for exterior wall insulation, waterproofing and anti-cracking layers, especially in high-rise buildings and residential projects. In addition, government support for energy-saving buildings has also promoted the use of this material. In addition to the construction industry, fiberglass mesh is also used in road and bridge reinforcement, industrial filtration and other aspects, which makes its market application more extensive. As the demand for sustainable materials increases, fiberglass mesh has received more and more attention due to its lightweight, high-strength and environmentally friendly characteristics.
