The global Fiber Handle Folding Knife market size is predicted to grow from US\$ 175 million in 2025 to US\$ 232 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Fiber handle folding knives usually consist of a blade, handle and folding mechanism. The blade can be stored in the handle through the folding mechanism, so that the whole knife is more compact and portable. This design makes the fiber handle folding knife a common tool in outdoor activities, camping, hiking, fishing and other scenarios. Fiber handles are usually made of lightweight materials, such as fiberglass composites, carbon fiber, etc., to ensure the lightness and durability of the knife. With the advancement of science and technology, the materials of fiber handle folding knives will continue to innovate. The application of new materials will make knives lighter, stronger and more durable. For example, the use of high-performance composite materials can increase the strength of the handle and prolong its service life.
