Fiber optic cross connector is a device used in fiber optic communication systems to achieve cross-connection of fiber optic signals. It can cross-connect signals from different optical fiber lines to other lines to achieve data transmission or signal routing between different optical fiber lines. Fiber optic cross-connectors usually include multiple fiber optic connectors, each connector corresponding to an optical fiber line. By plugging and unplugging fiber optic cables in the connector, different fiber optic lines can be connected or disconnected to achieve cross-connection of signals. This cross-connect flexibility allows fiber optic communications systems to dynamically route and manage different signals as needed.

The global Fiber Optic Cross Connector market size is projected to grow from US\$ 491 million in 2024 to US\$ 707 million in 2030; it is expected to grow at a CAGR of 6.2% from 2024 to 2030.
