A Fiber Optic Electric ARC Fusion Splicer is delicate equipment used to melt bare optical fiber together. It uses an electric arc to melt two optical fibers together at their end faces, to form a single long fiber. The resulting joint, or fusion splice, permanently joins the two glass fibers end to end, so that optical light signals can pass from one fiber into the other with very little loss.

The global market for Fiber Optic Electric ARC Fusion Splicers is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Fiber Optic Electric ARC Fusion Splicers market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
