The global Fiber Stretcher Module market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Fiber Stretcher Module is a specialized optical device used in fiber optic systems and experimental setups to intentionally introduce a controllable amount of strain or elongation to an optical fiber. This stretching alters the optical properties of the fiber, primarily affecting its refractive index and thereby changing the phase of the light passing through it. The primary applications of fiber stretchers are in optical signal processing, laser frequency stabilization, and optical sensing systems.
