The global Fiberglass Aerogel Insulation Sheet market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A fiberglass aerogel insulation sheet, also known as aerogel blanket or mat, is a type of flexible thermal insulation material that combines the insulating properties of aerogel with the structural support of fiberglass. The fiberglass aerogel insulation sheet is made by incorporating a layer of aerogel into a fiberglass fabric matrix. The aerogel, which is a highly porous and low-density material, provides exceptional thermal insulation by minimizing heat transfer. The fiberglass fabric, on the other hand, adds strength, durability, and flexibility to the insulation sheet. This combination of aerogel and fiberglass creates a lightweight and flexible insulation product that can be easily wrapped or draped around pipes, ducts, tanks, equipment, and other surfaces that require thermal insulation. The insulation sheet can be cut and shaped to fit various applications, making it highly versatile. Fiberglass aerogel insulation sheets have a low thermal conductivity, meaning they are highly effective at reducing heat transfer through conduction, convection, and radiation. They provide excellent temperature control, reducing energy loss and improving energy efficiency in buildings, industrial processes, and other applications.

United States market for Fiberglass Aerogel Insulation Sheet is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
