Fiberglass antenna is an antenna that uses glass fiber reinforced composite materials as its shell or support structure. It has the characteristics of lightweight, high strength, corrosion resistance and anti-aging. It usually integrates metal radiation units (such as vibrators or microstrip arrays) inside and is suitable for communication, radar, satellite navigation and other fields. The insulation and low dielectric loss of glass fiber can optimize the signal transmission efficiency. At the same time, its strong plasticity makes it easy to design complex shapes (such as vehicle-mounted, ship-mounted or base station antennas) and adapt to harsh environments (high humidity, salt spray, ultraviolet rays, etc.).

United States market for Fiberglass Antenna is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Fiberglass Antenna is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
