The fiberglass back cover is a mobile phone back cover made of glass fiber and resin and other matrix materials through a special process. Specifically:

First, this back cover material combines the characteristics of glass fiber, such as light weight, high strength, high toughness, good insulation, corrosion resistance and fatigue resistance, and the excellent performance of matrix materials such as resin, making the back cover both light and strong, and can effectively resist collision and vibration, providing excellent protection for the mobile phone.

Secondly, the fiberglass back cover is processed by molding and other process technologies, and can be made into various shapes and sizes to meet the design requirements of different mobile phones. Its light and thin design makes the mobile phone more portable, and its high strength also improves the durability and drop resistance of the mobile phone.
