The global Fiberglass Needle Mats market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fiberglass Needle Mat is formed by combing short glass fibers and using the mechanical action of needles to entangle the fibers with each other, without adding adhesives. In this process, the fibers and the reinforced glass fiber base cloth are intertwined, which enhances the overall structure of the felt layer and forms a stable three-dimensional microporous structure. It is a high-speed, high-efficiency high-temperature filter material. Compared with other high-temperature resistant fiber felts, it has special advantages such as low price and high high-temperature resistance, but its running resistance is higher than that of general chemical fiber high-temperature filter materials.

United States market for Fiberglass Needle Mats is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
