The global Fiberglass-reinforced Cable Tray market size is predicted to grow from US\$ 499 million in 2025 to US\$ 863 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

Fiberglass-reinforced Cable Trays are non-metallic cable support systems manufactured from fiber-reinforced plastic, typically using glass fiber reinforcement and thermosetting resin matrices such as polyester resin, vinyl ester resin or epoxy resin. They are designed to support, route, protect and manage power cables, control cables, communication cables and instrumentation cables in industrial, infrastructure and harsh-environment projects. Compared with metal cable trays, GPR/FRP cable trays offer corrosion resistance, lightweight structure, electrical insulation, low maintenance requirements and good resistance to moisture, chemicals and salt spray. Therefore, they are especially suitable for coastal facilities, chemical plants, oil and gas sites, power plants, mines, wastewater treatment plants and other environments where corrosion or electrical insulation is a key concern.

In 2025, global Fiberglass-reinforced Cable Trays production reached approximately 176 K Ton, with an average global market price of around US\$ 2892 per Ton.

The upstream raw materials of Fiberglass-reinforced Cable Trays mainly include glass fiber rovings, thermosetting resins, etc. Major glass fiber suppliers include Owens Corning, Jushi Group, Taishan Fiberglass, etc.

Fiberglass-reinforced Cable Trays are used in IT and Telecom, Manufacturing, Energy & Utility, Oil and Gas, Mining and Other applications. In IT and Telecom, they are mainly used in telecom infrastructure, communication rooms, base stations, outdoor cable

routing and data center support areas where corrosion resistance and electrical insulation may be required. Typical customers include China Telecom, BASF, Dow, etc.

The gross margin of Fiberglass-reinforced Cable Trays is generally influenced by resin system, glass fiber content, flame-retardant grade, load-bearing class, corrosion-resistance requirements, certification standards, customization level, production process and project channel structure. In general, the gross margin of FRP Cable Tray manufacturers is commonly in the range of 20%-40%.

Fiberglass-reinforced Cable Trays are an important non-metallic cable management solution used to support, route and protect electrical, control, communication and instrumentation cables in industrial and infrastructure projects. Compared with traditional metal cable trays, Fiberglass-reinforced Cable Trays offer strong corrosion resistance, lightweight structure, electrical insulation, low maintenance demand and good durability in humid, chemical, coastal and outdoor environments. The market is mainly segmented into Cable Ladder, Tray Type Cable Tray. These products are widely used in IT and Telecom, Manufacturing, Energy & Utility, Oil and Gas, Mining and Other applications, especially where corrosion resistance, installation efficiency and long service life are important purchasing considerations.

In terms of product type, Cable Ladder is mainly designed for power cable routing and heavy-duty cable support. Its open ladder structure provides good ventilation, easy cable fixing, convenient inspection and strong load-bearing performance, making it suitable for industrial plants, power facilities, petrochemical sites, mining projects and long-distance cable routing systems. Tray Type Cable Tray provides more continuous support for cables and is suitable for control cables, communication cables, instrumentation cables and applications requiring better cable containment and protection. Compared with ladder-type structures, tray-type FRP cable trays are more suitable for environments where cable density is higher or where cables require additional mechanical protection.

In terms of application, IT and Telecom is an important application area for Fiberglass-reinforced Cable Trays, mainly covering communication rooms, telecom base stations, data center support facilities, outdoor cable routing and network infrastructure. In this field, FRP products are valued for insulation performance, lightweight installation and resistance to outdoor corrosion. Manufacturing is another key application market, including chemical plants, electronics factories, food processing plants, pharmaceutical plants, automotive factories and other industrial facilities. In these environments, FRP cable trays help reduce maintenance costs and improve cable system reliability,

especially in areas exposed to chemicals, moisture or cleaning agents. Energy & Utility applications include power plants, substations, renewable energy projects, grid infrastructure, wastewater treatment plants and desalination facilities, where FRP cable trays are used to improve corrosion resistance and long-term operational stability. Oil and Gas is a high-value application segment, as refineries, petrochemical complexes, LNG facilities, offshore platforms, coastal terminals and pipeline systems often require cable tray products with strong resistance to salt spray, chemicals and harsh operating conditions.

Market Driving Factors for Fiberglass-reinforced Cable Trays include the increasing demand for corrosion-resistant cable management systems in harsh industrial environments, the continued expansion of power, utility and renewable energy infrastructure, the growth of telecom networks and data center construction, the rising use of lightweight and electrically insulating materials, and the replacement of traditional metal cable trays in chemical, coastal, offshore, mining and wastewater treatment applications. In addition, stricter requirements for operational safety, lower maintenance cost, longer service life, faster installation and improved cable system reliability are encouraging project owners and engineering contractors to adopt Fiberglass-reinforced Cable Trays. The development of customized FRP profiles, flame-retardant resin systems, UV-resistant formulations and heavy-duty pultruded structures also supports wider adoption across industrial and infrastructure projects.

Market Restraints for Fiberglass-reinforced Cable Trays include relatively higher initial purchase cost compared with some standard galvanized steel cable trays, limited market awareness in projects traditionally dominated by metal cable management systems, and the need for product certification, load testing, flame-retardant performance verification and compliance with project specifications. FRP products may also face challenges in applications requiring extremely high mechanical strength, high-temperature resistance or fire-performance standards beyond ordinary composite material capability. Raw material price fluctuations in resin, glass fiber and additives can affect production cost and profitability.
