The global Fiberglass Surfacing Veils market size is predicted to grow from US\$ 414 million in 2025 to US\$ 601 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Fiberglass surfacing veil is a non-woven mat made of randomly oriented glass fibers distributed in a special binder through a wet-laid process. It increases the surface smoothness, glossiness and color cleanliness and improves the product's water resistance and durability for composite surface applications.

Surfacing veils are widely used in FRP (fiber-reinforced plastic) products for surface finishing, corrosion resistance, and improved bonding. The push for lightweight and recyclable composite products is boosting demand for glass fiber reinforcements with improved surface aesthetics.

As global infrastructure projects expand, especially in water pipelines, chemical storage tanks, and construction panels, demand for high-quality surfacing veils grows steadily.

Industries such as wind energy, marine, automotive, and building facades increasingly adopt FRP solutions that incorporate surfacing veils for better surface appearance and weatherability.
