Fibrin glue hemostatic agent is a medical product used to stop bleeding. It is mainly composed of fibrin and other auxiliary components. Fibrin is a protein that is an important component in the blood coagulation process. It can form clots on the wound surface, promote blood coagulation and stop bleeding. When fibrin glue hemostatic agent is applied to the wound surface, the fibrin will combine with the fibrin in the plasma in the injured tissue to form a viscous substance similar to coagulation, which can quickly seal the wound and promote blood coagulation to achieve hemostasis. Effect. Fibrin glue hemostatic agents are usually used in surgeries, trauma treatment, trauma first aid and other occasions, especially when rapid hemostasis is required, and can provide effective hemostasis measures. It can be used on wounds of all sizes, including surgical incisions, injuries, lacerations, or cuts. Fibrin glue hemostatic agents are usually available in gel or powder form and can be applied or spread directly on the wound. It is fast, effective and convenient. It is a commonly used hemostatic tool and is widely used in the medical field.
