The global Fibrin Sealants market size is predicted to grow from US\$ 909 million in 2025 to US\$ 1212 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

Fibrin sealant, a two-component substance consisting of thrombin and fibrinogen, is used as a hemostatic or adhesive in various surgical solutions. In clinical practice, a fibrin sealant consists of a concentrated solution of fibrinogen and Factor XIII, which combine with a solution of calcium and thrombin to form a coagulum that stimulates clotting. Beriplast P and TISSEEL are some of the commercially available fibrin sealants.

The Americas accounted for 48% of the market share during the forecast period. Growing public awareness, increase in product launches, and numerous FDA approvals for novel instruments are expected to drive the market in this region.
