FibroScan is one of the most well-known non-invasive devices for assessing liver fibrosis. It uses transient elastography to measure liver stiffness, which correlates with the degree of fibrosis. The device emits a painless vibration, and the speed of the shear wave passing through the liver tissue is measured. A higher speed indicates stiffer tissue, which suggests more severe fibrosis.

The global FibroScan market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.

LP Information, Inc. FibroScan has patents in major countries/regions around the world, including the United States, Europe, and China. In China, there are several generic products, including Wuxi Hisky Med, Eieling Technology, and Mindray. In Europe and United States, FibroScan is an exclusive product with a patent valid until 2039. In addition to patent protection, the American Association for the Study of the Liver and the European Association for the Study of the Liver have designated Echosens as the manufacturer in their guidelines. Therefore, we believe that in the next 15 years or even longer, it is unlikely that FibroScan will have competitors in Europe and the United States.
