The global Field Automatic Pressure Standards market size is predicted to grow from US$ 742 million in 2025 to US$ 1259 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

In 2024, global sales of field automatic pressure standards will reach approximately 41,500 units, with an average unit price of approximately $17,000. Field automatic pressure standards are a type of high-precision pressure reference device that typically integrates a high-stability pressure generator module, a digital sensor, temperature compensation, and an automatic control system. They can fully automatically generate and calibrate pressure values ??from low to ultra-high pressures in the field or laboratory. They are used for measurement and calibration of various pressure sensors, transmitters, pressure gauges, and process instruments, with accuracy reaching 0.01%FS or higher. They are key metrological equipment for energy, aerospace, petrochemical, power, and metrology and testing organizations. Their upstream supply relies on high-precision pressure sensor cores, quartz or silicon piezoresistive elements, servo control valves, hydraulic/pneumatic modules, and precision machined parts. Their downstream market primarily targets metrology and testing organizations, process industries (petrochemical, power, and pharmaceutical), research laboratories, and aerospace equipment manufacturers.
