Field Joint Coatings Service refers to the on-site application of protective coatings to welded joints of pipelines after installation. These coatings restore corrosion protection at pipe joints where factory-applied coatings are removed during welding. The service includes surface preparation, coating application, curing, and inspection to ensure long-term durability and resistance to corrosion, moisture, and environmental stress. It is widely used in oil and gas pipelines, water transmission systems, and industrial infrastructure projects. The industrial chain of Field Joint Coatings Service includes upstream materials such as epoxy powders, polyethylene tapes, heat shrink sleeves, liquid coatings, and surface preparation equipment. The midstream consists of service providers performing coating application, quality control, and inspection processes. Downstream applications involve oil and gas pipeline operators, EPC contractors, water utilities, and industrial infrastructure developers. The ecosystem also includes testing, certification, and maintenance services to ensure coating performance and pipeline integrity over time.
