The global Fieldbus Communications Computer Board market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Fieldbus communications computer boards are serial data network devices that connect computers and programmable logic controllers (PLCs) to fieldbus networks. Fieldbus networks provide digital, two-way, multi-drop communication links between intelligent measurement and control devices. Two-way communications allow data to be both read from and written to field devices. For example, the calibration constants for a sensor can be stored directly in the device itself and changed as needed. Fieldbus communications computer boards provide both input and output functions.
