In today's highly automated machines, fieldbus valve manifolds are replacing conventional hardwired solutions. They perform vital functions by integrating communication interfaces to pneumatic valve manifolds with input/output (I/O) capabilities. This allows programmable logic controllers (PLCs) to efficiently turn valves on and off and to channel I/O data from sensors, lights, relays, individual valves, or other I/O devices via various industrial networks. The resulting integrated control packages can also be optimised to allow diagnostic benefits not previously available.
