The global Filgrastim and Biosimilars market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Filgrastim is a recombinant form of Granulocyte-Colony Stimulating Factor (G-CSF) that stimulates the bone marrow to increase production of neutrophils, essential white blood cells that fight infections. Biosimilars of filgrastim are biologic drugs highly similar to the original filgrastim product in terms of safety, efficacy, and potency but are typically more cost-effective. They are commonly used to manage neutropenia, particularly in patients undergoing chemotherapy, to lower infection risk.
