The filling and sealing machine is a packaging equipment that integrates automatic filling and sealing functions. It is widely used in food, beverage, dairy products, medicine, chemical and daily chemical industries. The equipment is mainly used to accurately fill liquid, slurry or granular materials into pre-shaped packaging containers (such as plastic cups, bottles, bowls, boxes, etc.), and then complete the sealing process by heat sealing, aluminum foil sealing, capping and other methods. The filling and sealing machine usually has modular functions such as automatic cup dropping, filling metering, film (cover), heat sealing, trimming, and cup output. High-end models can also be equipped with ultraviolet sterilization, nitrogen replacement, date coding, visual inspection and other devices to ensure the hygiene, safety and appearance consistency of the product. This type of equipment has a high degree of automation, stable operation and high efficiency. It is one of the important equipment for modern industrialized food production.
