Abstracts

The global Film Analog Pyroelectric Detector market size is predicted to grow from US$ 516 million in 2025 to US$ 928 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

In 2024, global sales of analog pyroelectric detectors (APDs) will reach approximately 135 million units, with an average unit price of approximately US$3.60 per unit and a gross profit margin of approximately 27%. Analog pyroelectric detectors are infrared detection devices that generate charge signals in response to temperature changes using pyroelectric crystals (such as lithium tantalate and lead zirconium titanate). Their output is a continuous analog voltage signal, characterized by fast response, low power consumption, and high sensitivity. They are commonly used in applications such as human infrared (PIR) sensors, security monitoring, smart lighting, appliance control, and environmental monitoring. Compared to digital pyroelectric detectors, analog devices offer advantages in cost and circuit design flexibility, but they rely more heavily on back-end signal amplification and processing circuitry. The market is benefiting from the continued expansion of smart homes, security systems, and IoT devices, with particularly strong demand in consumer electronics and basic security products. The upstream mainly involves the supply of pyroelectric crystal materials, infrared filters, packaging substrates, etc., midstream companies are responsible for detector design, manufacturing and packaging, and the downstream is widely used in infrared alarms, smart lighting control, security cameras and various terminal sensing modules. Broadcom's production capacity is 32 million units.

United States market for Film Analog Pyroelectric Detector is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
