In 2024, global production reached approximately 40,416 ton, with an average global market price of around USD 6,000 per ton. A factory gross profit of USD 1,800 per ton with 30% gross margin. A single line full machine capacity production is around 1,200 ton per line per year. downstream demand is concentrated in personal care & cosmetic, pharmaceutical and adhesives & coatings. VP/VA copolymer is used in aerosol hair spray as the principal film former to produce a clear, fast-drying film on hair that provides hold, humidity resistance and brushability. VP/VA Copolymer (Vinylpyrrolidone/Vinyl Acetate Copolymer) is a synthetic film-forming polymer used in cosmetics and hair care to create a flexible film for hold (hair sprays, gels), reduce moisture loss (skin care), and improve product texture/adhesion (mascara, foundation). It combines water-loving vinylpyrrolidone (VP) and water-hating vinyl acetate (VA) units, making it less sensitive to humidity, providing flexible hold without stiffness, and offering benefits like smooth feel and ingredient suspension.
