The global Film Forming Starch market size is predicted to grow from US\$ 978 million in 2025 to US\$ 1481 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

The starches that form edible coatings and films are used to contain antimicrobials, colorants, flavorings, and leavening agents as well as protective coatings and films that shield food and pharmaceutical products from oxygen and moisture intrusion. These renewable biopolymers, which form the film-forming starches, are produced in great quantities throughout the world in all geographical areas. Due to the ease of processing and availability of starches all over the world, film-forming starches are therefore more affordable than other materials that create films and coatings.
