A film frame carrier magazine is a type of equipment used in the semiconductor wafer fabrication process. It is a storage and handling device for wafers during various stages of the process, such as cleaning, etching, and deposition. The film frame carrier magazine provides a protective environment for the wafers to minimize contamination, handling damage, or other sources of defects. The film frame carrier magazine is typically made of a durable material, such as stainless steel or aluminum, and has a clean room compatible design. It has a series of slots or compartments that hold individual film frames, each of which holds a single wafer. The film frames are designed to hold the wafer securely while providing access to both sides of the wafer. The film frames are also designed to be easily loaded and unloaded from the carrier magazine. The film frame carrier magazine is typically used in conjunction with other equipment in the semiconductor fabrication process, such as a wafer transfer system or a processing tool. The carrier magazine is typically transported between the various processing tools and storage areas to ensure that the wafers remain protected throughout the entire process.
