CO2, also known as R744, is a carbon dioxide refrigerant commonly used in refrigeration and air conditioning systems. When using CO2 as the refrigerant, a filter drier is usually required to ensure efficient operation of the system. The main function of the CO2 drying filter is to remove moisture and other impurities in the system. Moisture can cause corrosion, condenser frosting and other problems in refrigeration systems, so CO2 must be kept dry and pure. Filters may include adsorbents to absorb moisture and other impurities. By using a CO2 filter drier, you can ensure efficient operation of your CO2 refrigeration system, extend the life of your equipment, and reduce moisture-related issues. This is critical for reliability and performance in refrigeration and air conditioning systems.
