Membrane slices are filter membranes cut into circular or other shapes according to standard or specific specifications. They are widely used in laboratory analysis, liquid filtration, microbiological testing, environmental monitoring, and other fields. They are typically made from microporous membrane materials (such as polyethersulfone, polypropylene, nylon, and PTFE) and have specific pore sizes, diameters, and retention properties, making them compatible with various filters or holders. They can precisely retain particles, microorganisms, and impurities in solutions, making them a common consumable in laboratory sample pretreatment and quality control.Sales volume in 2024 will be 85 million units, with an average price of US$2 per unit.

United States market for Filter Membrane Slices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Filter Membrane Slices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
