Fin evaporator is an efficient heat exchanger, whose main principle is to transfer heat from one medium to another, in order to achieve the purpose of cooling or heating. It is composed of a series of parallel arranged metal fins, which play a role in increasing the heat exchange surface area and promoting heat transfer. Finned evaporators are usually made of aluminum because aluminum has good thermal conductivity and corrosion resistance.

The global Fin Evaporators market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
