Financial IC security chip, also known as chip bank card, is a bank card with IC chip issued by the bank and in compliance with the PBOC2.0 standard of the People's Bank of China. This chip can store information such as keys, digital certificates, fingerprints, etc., and has the characteristics of high security, not easy to copy, and large capacity. Compared with traditional magnetic stripe cards, financial IC cards use chips for data storage and encryption and decryption, effectively preventing information from being copied and tampered with, and eliminating 'cloning cards', which fundamentally improves the security of bank cards. Financial IC security chip is a technology widely used in the financial industry, aiming to improve the security and convenience of financial instruments such as bank cards.

United States market for Financial IC Security Chip is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
