The quantitative evaluation service of the financial industry is a professional service that uses statistics, mathematical models, and data analysis technologies to quantitative analysis and evaluation of financial markets, investment portfolios and risk management. The purpose is to provide scientific decision -making support for financial institutions, optimize investment strategies, evaluate risks and income, thereby improving the efficiency and accuracy of overall financial management.

The upstream of the financial industry's quantitative assessment service value chain consists of data and infrastructure supply layers, mainly including macroeconomic and industry databases, financial market data, alternative data (public opinion, satellite data, consumer behavior data, etc.), and cloud computing and computing power platforms. The midstream comprises quantitative assessment and analysis service providers, leveraging statistics, econometrics, machine learning, and AI models to provide financial institutions with quantitative analysis tools and solutions such as risk assessment, asset pricing, portfolio optimization, credit scoring, stress testing, and performance attribution. The downstream consists of banks, securities firms, funds, insurance companies, asset management institutions, and fintech companies, using these services for investment research decisions, risk management, compliance review, and product pricing. In terms of profit structure, the industry primarily relies on data subscription fees, model/system licensing fees, and consulting and customized project fees. It is a technology and data-intensive service, with an overall gross profit margin typically between 50% and 75%.

Standardized quantitative platforms and model subscriptions have higher gross profit margins, while customized consulting projects have relatively lower margins.
