The fineblanking press is not a standard stamping press. Fineblanking presses are unique by providing three specific motions: a stinger motion, which brings the stinger plate up and holds the material in place during blanking; a blanking motion, which provides the blanking force to push the part into the die cavity; and a counter pressure motion, which holds the piece against the blank punch during blanking and ejects the piece part from the die cavity after blanking is complete.
