Fingerprint identification module cover refers to the external protective layer or panel covering the fingerprint identification module. It is an important component for realizing the fingerprint identification function. In the fingerprint identification module, the cover is tightly fitted with the fingerprint identification module, and the tight connection between the two is ensured by adhesive or other fixing methods. This fitting method helps to ensure that the fingerprint sensor is isolated from the external environment while providing a flat and easy-to-identify surface. The fingerprint identification module cover can be made of a variety of materials, such as sapphire, glass or ceramic. These materials usually have high strength, high hardness and good wear resistance to ensure stability and reliability for long-term use.

The global Fingerprint Identification Module Cover market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
