## Abstracts

The global Finned Resistor market size is predicted to grow from US\$ 1812 million in 2025 to US\$ 3618 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

A finned resistor is a type of electrical resistor that incorporates fins or heatsinks as part of its design to enhance heat dissipation. Resistors are electronic components that restrict the flow of electric current, and they tend to generate heat in the process. In applications where resistors operate at high power levels or for extended periods, effective heat dissipation is crucial to prevent overheating and ensure reliable performance.

The fins on a finned resistor are typically made of materials with good thermal conductivity, such as aluminum. These fins increase the surface area of the resistor, allowing for better heat transfer to the surrounding air. As a result, the resistor can dissipate heat more efficiently, preventing temperature buildup.

United States market for Finned Resistor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Finned Resistor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
