The global Finolimumab market size is predicted to grow from US\$ 34.24 million in 2025 to US\$ 327 million in 2032; it is expected to grow at a CAGR of 30.1% from 2026 to 2032.

Finolimumab is a recombinant humanized anti-PD-1 monoclonal antibody developed by Sinocelltech. It specifically binds to the PD-1 receptor on the surface of T cells, blocks the PD-1/PD-L1 immunosuppressive pathway, relieves the inhibition of the body's immune system by tumor cells, and activates the endogenous anti-tumor immune response, thereby inhibiting tumor proliferation and metastasis. As a new generation of immune checkpoint inhibitor, this drug is mainly used for the treatment of solid tumors such as recurrent or metastatic squamous cell carcinoma of the head and neck and advanced hepatocellular carcinoma. It is characterized by high affinity, moderate half-life and controllable immune-related adverse reactions. It can be used alone or in combination with chemotherapy and targeted drugs, providing a long-acting and safe immunotherapy option for patients with advanced malignant tumors. In 2025, global Finolimumab (AnYouPing?) production reached approximately 12,000 vials.

As a new generation of domestic PD?1 inhibitor, Finolimumab occupies a unique position in the domestic immunotherapy market by virtue of its differentiated indication layout and clinical efficacy advantages. Its core strength lies in filling the gap of domestic PD?1 in the first-line treatment of the full population with head and neck squamous cell carcinoma, while demonstrating excellent survival benefits in hepatocellular carcinoma, with clinical data significantly superior to traditional regimens. Faced with the intense competition and highly saturated domestic PD?1 market between imported and domestic products, Finolimumab has strong potential for domestic substitution relying on localized R&D, clinical data more suitable for Chinese patients, and price advantages over imported drugs. Its inclusion in the national medical insurance catalogue has significantly improved accessibility and affordability, which will

further drive the rapid growth of market penetration. In the future, its market expansion will focus on indication expansion, penetration into primary medical markets, and development of combination therapies. Meanwhile, it faces challenges such as medical insurance price reduction, rapid follow-up of competitors, and intensified price competition. It is necessary to consolidate and expand its market position through continuous clinical value establishment, academic promotion and optimization of commercialization strategies.
