The global Fire Safety Helmets market size is predicted to grow from US\$ 377 million in 2025 to US\$ 453 million in 2031; it is expected to grow at a CAGR of 3.1% from 2025 to 2031.

Fire helmets are manufactured with either fibreglass or thermoplastic materials that both of them have shown to provide protection to firefighters during extreme heat conditions. Fiberglass helmets are manufactured with an amalgamation of glass fiber and thermoset resins.

Increasing awareness of workers' safety in developing nations such as India and China is expected to fuel the growth of the global market. Manufacturers have been concentrating on modifying existing products and designing accessories to increase the usability of safety helmets in a variety of environmental conditions. Rising industrialization in developing countries is expected to fuel the market over the forecast period.

Thermal discomfort is a significant threat to the global safety helmet industry. The materials used in manufacturing these helmets become brittle and lose strength when continuously exposed to higher temperatures. This factor is expected to restrain the market over the forecast period.
